Built a simple command-line game inspired by Pacman using C as a group project for the final project of the organization program I participated in. My role involved game design planning, creating the game map, developing character movement functionality, and implementing the finish line system.

Project Title

HI-Toyz

Year Accomplished

2024

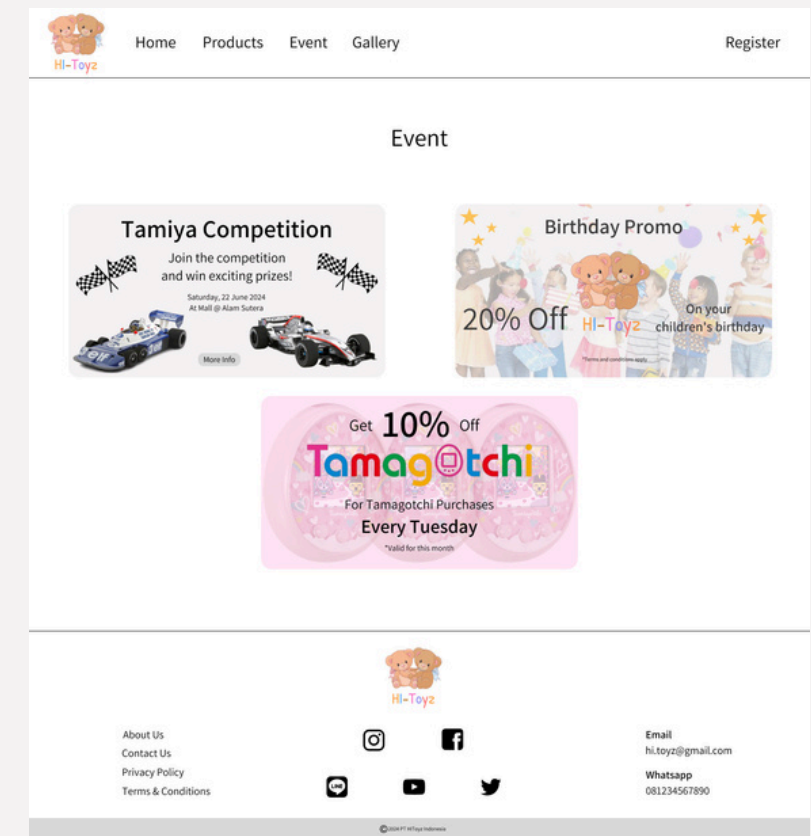

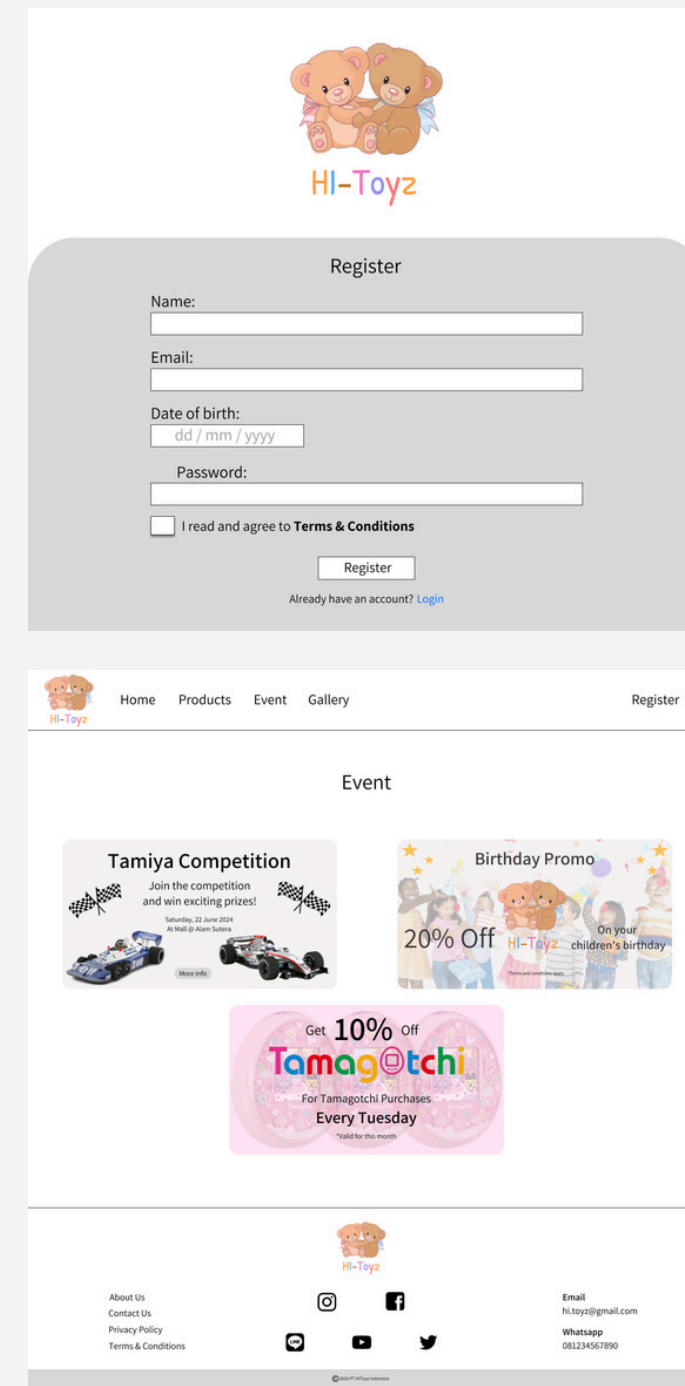

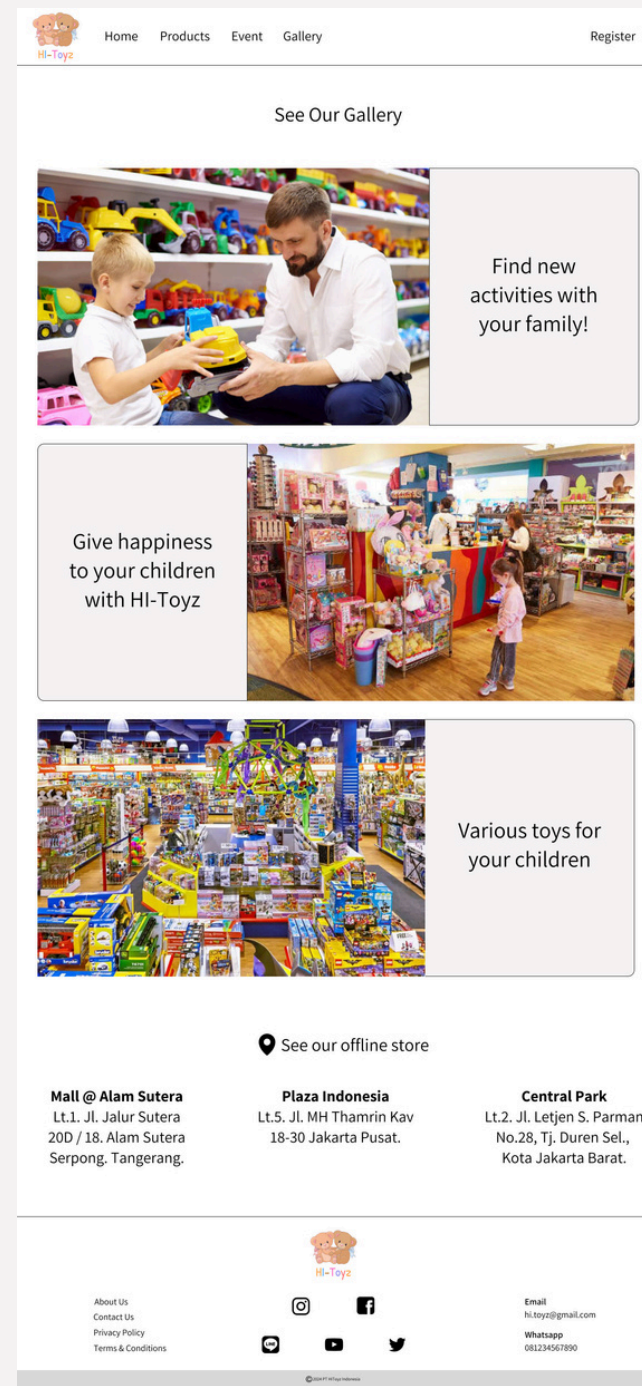

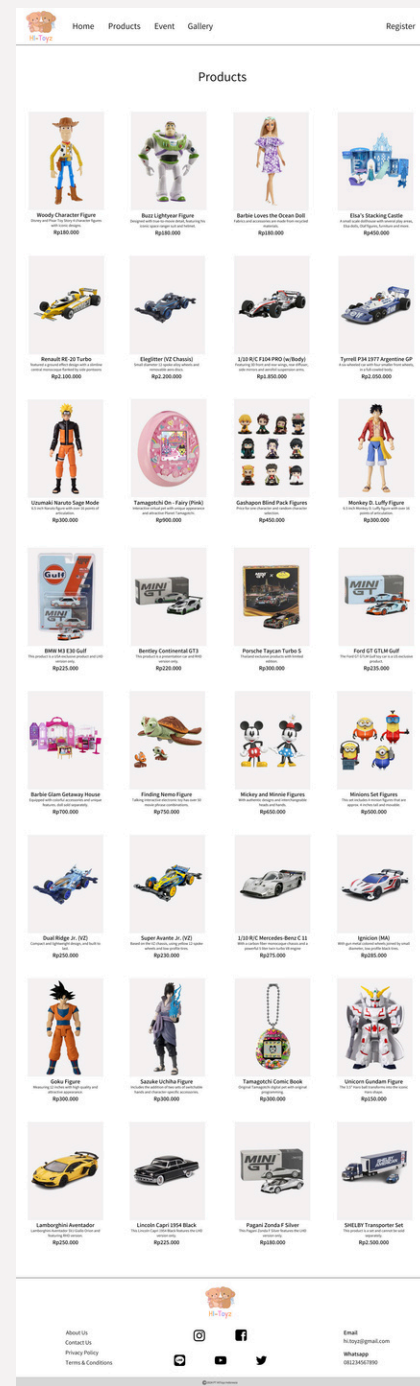

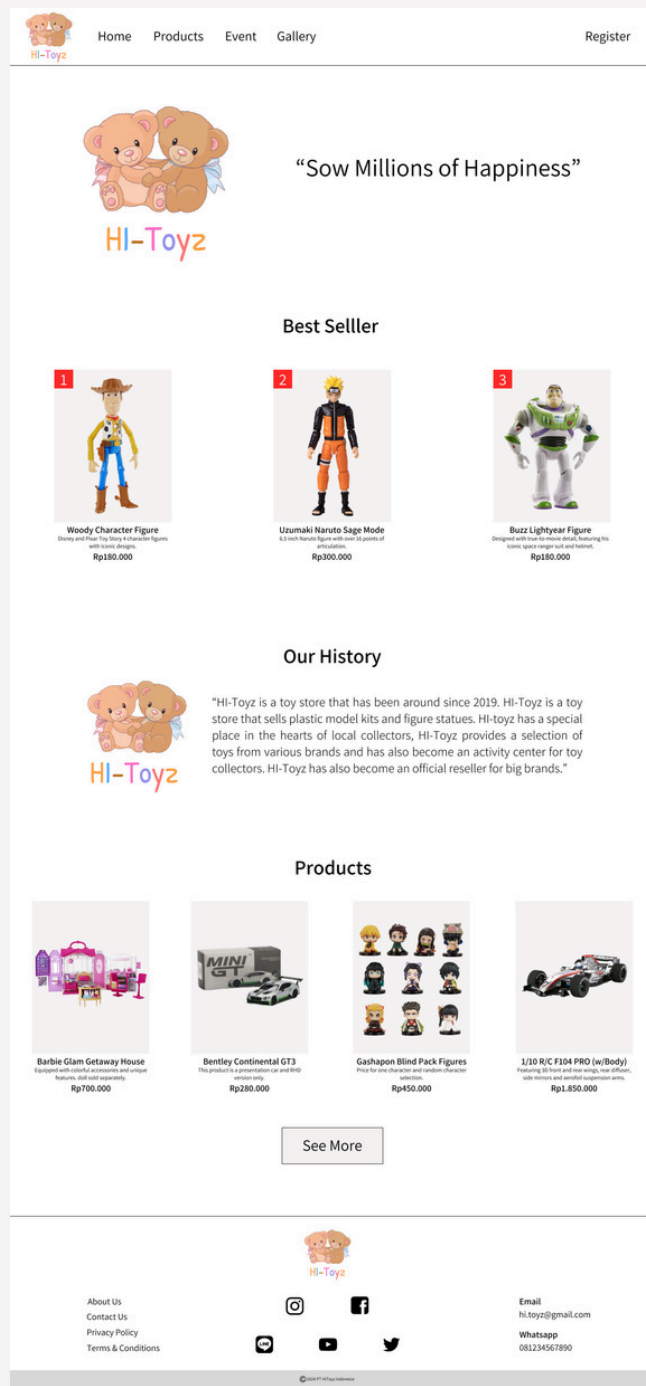

Role Position

Front-End Developer

Publication Link

<https://github.com/heyomicaww/HiToyz.git>

HI-Toyz is an individual final project created as part of a university course requirement. The project involved designing and developing a toy store website user interface using HTML, CSS, and JavaScript, along with creating a prototype to visualize the user experience and website flow.

Portofolio Submission for
Apple Developer Academy
Indonesia

Developed a mobile health monitoring application using Swift and SwiftUI as a group thesis project to manage and track user health data, including glucose levels, blood pressure, uric acid, and cholesterol. My role involved application planning and design, developing reminder, profile, login, and account deletion features, designing and implementing data storage using Firebase Firestore.
